

Service-Free for 10 Years

Back in 1994 we accepted a challenge from a major East Coast customer of ours to help him **lower his operating costs** on liftgates.

Before this time, bronze bushings were optional on some liftgates but rarely purchased. Composite bushings were unheard of. Metal-on-metal moving parts required constant lubrication. When service was neglected, parts wore out and needed replacing.

Anthony went to work thoroughly designing and testing new composite materials for bushings. The result - a new industry standard with the "Maintenance Free" concept standard for all Tuckunder models, and at no additional cost to customers. Not only was PM time reduced, but parts lasted longer. For our customers, **operating costs were greatly reduced.**

That was 10 years and some hundreds of thousands of bushings ago for Anthony Liftgates. Today, following our lead, all major liftgate companies offer bushings as standard equipment. Maybe this is why people look to us for new innovations!

Keep checking our website www.anthonyliftgates.com. In the upper right-hand corner of our Home Page you'll find a link directed to telling you What's New at Anthony. Check out today's new innovations!
