

MRT Power Unit

Galvaneal steel enclosure is powder coated to provide long, trouble-free protection with these outstanding features:

- **New Door Design** – flip-up design allows door to pivot and store on top of enclosure.
- **Slide Out Trays** – on both the battery and power unit sides allow for easy repair and servicing of batteries, motors, solenoids, valves, and changing hydraulic fluid.
- **Hydraulic Reservoir** – clear-view level check on front of tank; drain plug on bottom of fluid reservoir allows for easy and complete draining of fluid. Plug accessible through hole in slide-out tray.
- **New Mounting Frame** – makes for easy installation and easier removal to replace entire enclosure after many years of tough use or in a leasing application.
- **Steel Divider Panel** – segments batteries from power unit to prevent battery gases from causing corrosion to the power unit.
- **Louvered Vents** – in back of battery side allows battery gases to escape.
- **Power Cut-Off** – Switch located on side of enclosure, along with 200 Amp Circuit Protection.
- **Added Weather Protection** – Heat shrink wire connections and stainless steel terminals used throughout.
