

ANTHONY UPDATE

Trail Charger

The BEST way to control charging and reduce maintenance on liftgate batteries!

- *Remote charging system increases liftgate battery life by providing the optimum charging process and conditions*
- *Delivers a powerful 20 Amp charging rate, when truck is running, to keep liftgate batteries at peak charge*
- *Provides a fully regulated 14 volts DC - won't over or under charge batteries*
- *Mounts near liftgate battery(s), eliminates problems with long, heavy cables and plugs - no more voltage drop, grounding issues, or temperature concerns*
- *Designed for trailer applications - connects to tractor through standard 7-pin plug; also ideal on straight trucks*
- *Equipped with corrosion resistant Deutsch connectors*

Anthony's **Trail Charger** acts like a voltage amplifier. Similar to how a stereo amplifier increases sound output, the **Trail Charger** amplifies voltage to liftgate batteries, remotely, to eliminate voltage loss over heavy power cables. And because batteries require higher voltage at lower temperatures, the **Trail Charger** automatically raises and lowers the voltage output according to temperature changes, always optimizing the charge.

To learn more how our new Trail Charger can benefit your operation, contact Anthony Customer Service at 1-800-482-0003.
