

Made in the U.S.A.

Magnum RailTrac® Runs & Runs & Runs

The Anthony MRT's **Dual Operating Motor System**, in combination with its **Heavy Duty Slide Runners**, provides the highest reliability at the lowest cost. That's common sense engineering that can save thousands – even over a relatively short term. Research shows that an Anthony Gate can save you more than \$1,300 in parts and labor over it's competitors in just a few years.

MRT Dual Operating Motor System

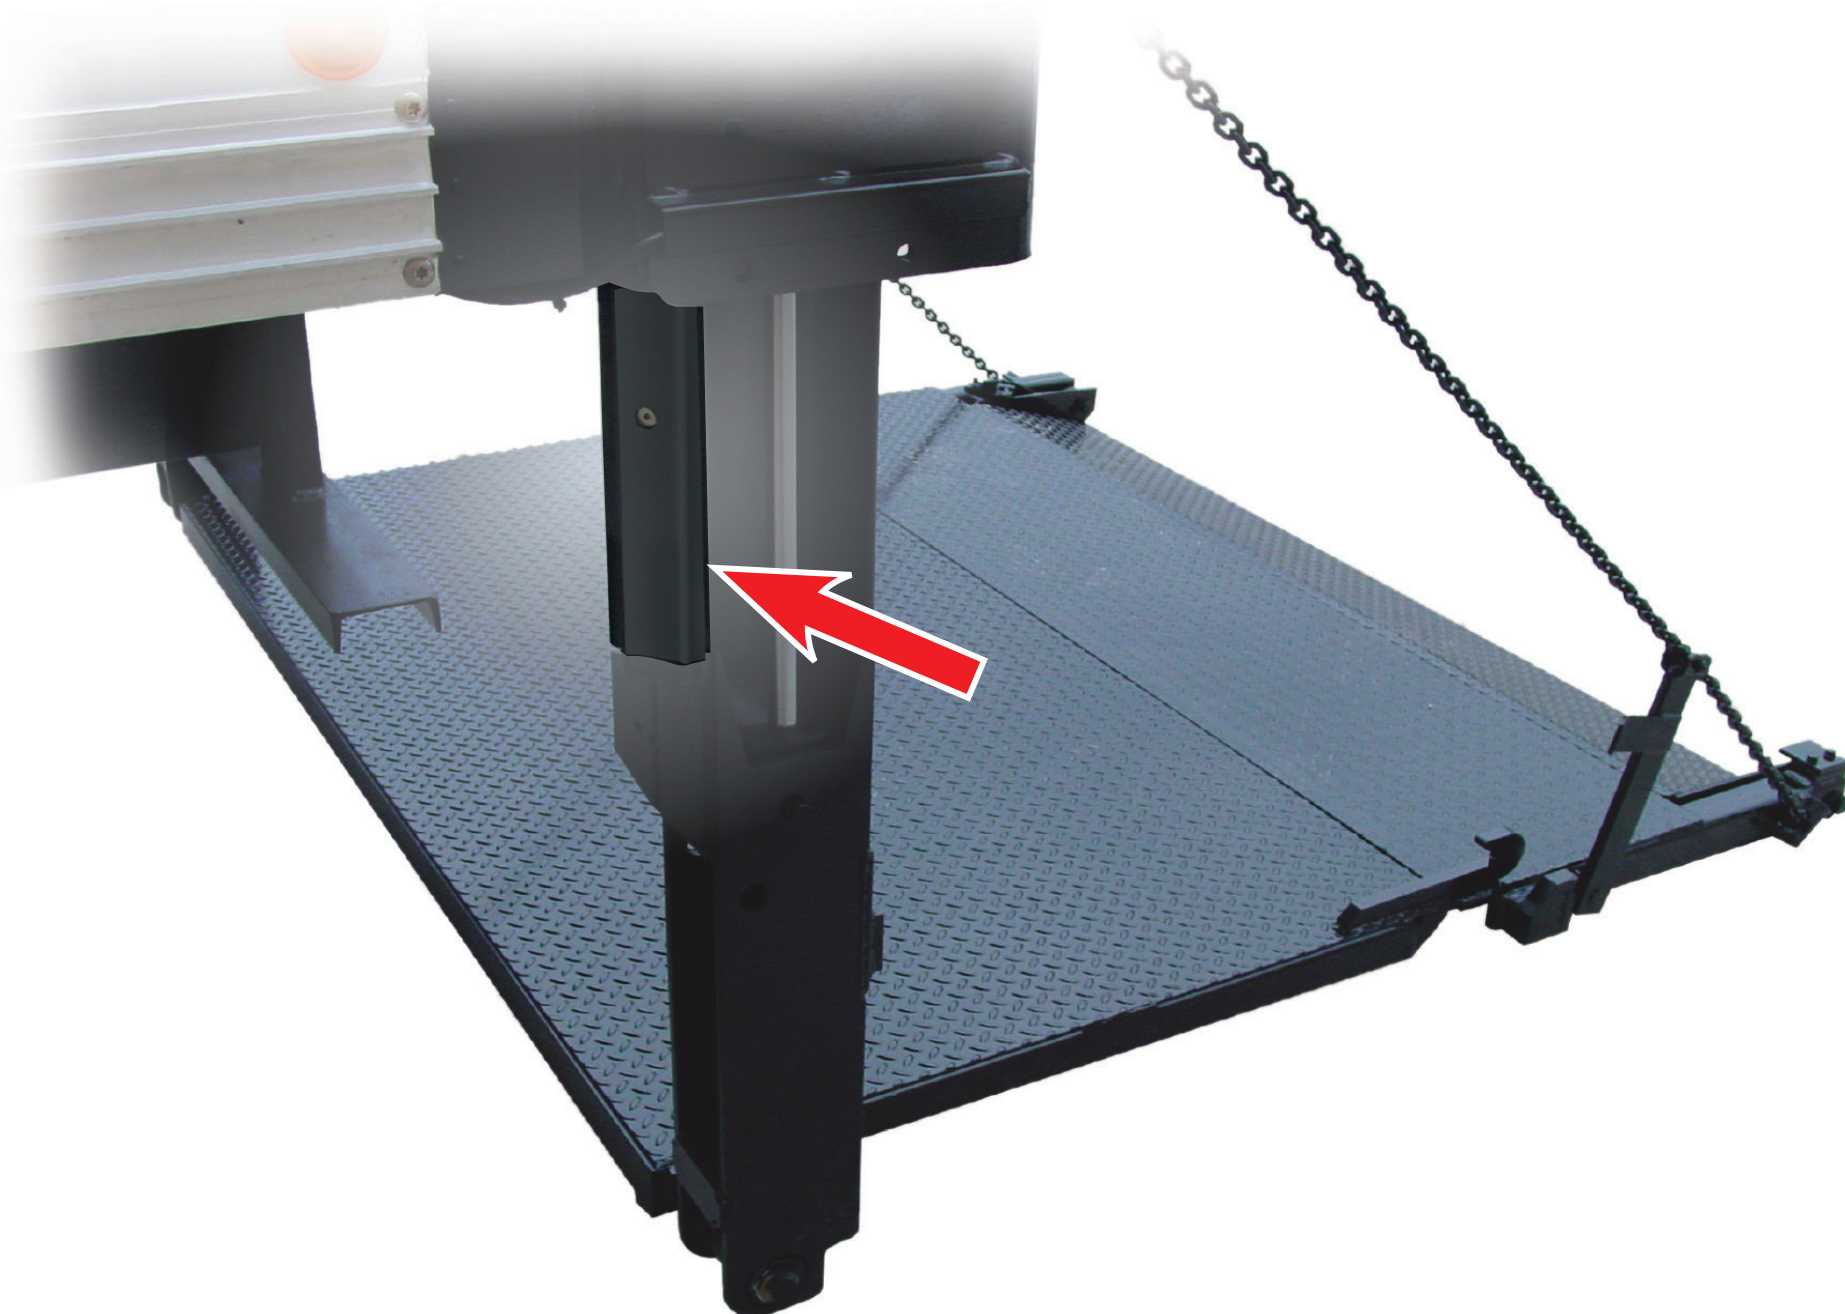

- **Reduces heat during operation**
Two motors are required to work only half as hard as one under normal conditions
- **Extends motor life**
Amperage draw is spread across two motors resulting in less thermal build-up
- **Provides redundancy**
The two motors work in tandem... or individually should one motor fail

MRT Heavy Duty Slide Runners

- **Bearing-Free One Piece Design**
No moving parts
Nothing to wear out
- **Lubrication/Service Free**
No rollers or bearings to routinely inspect, clean, lubricate, and replace
- **Lifetime Warranty**
Free replacement of SLR Sliders over the lifetime of any Anthony Gate
