

New Extended-Duty Hydraulic Power Unit

For Anthony's Medium RailTrac[®], Tuckunder[™], and Pick-up Gates.

Improving Reliability – we're now using *extended duty* power units in our Medium RailTrac, Tuckunder, and Pick-Up liftgates, with these important features.

Pressure Balanced Gear Pump – provides efficiencies over 90% even at full load, reducing wear and noise. Does not lose volumetric efficiency over time like gear types commonly do ... pump uses its own internal pressure to maintain tight gear tolerances.

Heavy-Duty Start Solenoid – contains reliable silver oxide contacts that resist "doorbelling" and sticking like plain copper contacts.

Dual Wire Terminals – on power unit motor, start solenoid, and lowering valve coil. These separate (+) positive and (-) negative connections provide a more reliable ground than self-grounding components.

Heavy-Duty Motor – 1600 watt *extended duty* service, vs typical 1500 watt.

Other Key Features – include case-hardened steel gears, pressure balanced bearings, PTFE base bushings, and extruded aluminum high-pressure body.

The result – *greater reliability and extended service!*

For more information about other Anthony advantages, call us at (815) 842-3383. You can also fax your request to (815) 844-3612 or E-mail us at sales@anthonyliftgates.com. And be sure to visit our Web site at www.anthonyliftgates.com.
